Art Unit: 1774

1. The abstract of the disclosure is objected to because it contains the legal word, "comprising"; it has more than paragraphs. Correction is required. See MPEP § 608.01(b).

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1,2,5,6,4 provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims

1,5,6,23,24,13,14,19-22,33-36 and 38 of copending Application No. 10/339479.

Although the conflicting claims are not identical, they are not patentably distinct from each other because the fiber sheet could be one of contamination resistance; it would have been obvious to the skill artisan to coat both sheet's side with different oxide material having different valences , in the absence of unexpected results.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1,2,3,5 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Tada et al(US 6074981).

The cited reference teaches the claimed process including a functional fiber sheet comprising synthetic fiber coated on both sides with metallic oxides via vapor-deposition- col 2, lines 63-67; col 3, lines 18-40; col 4, lines 41-55; col 5, lines 6-15. concerning claim 5, the reference teaches woven material (col 4, lines 41-45; col 7, lines 17-20) and similar fibers as required by claim 6, col 3, lines 31-34; col 4, lines 44; col 7, lines 18-23. concerning claims 2 and 3, the reference teaches similar thickness- col 3, lines 5-17; col 11, lines 60-64; col 12, lines 60-66; and similar percentage amounts in col 4, lines 1-12. the reference teaches various valence oxide material- see reference.

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1774

7. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tada et al (US 6074981) alone.

The cited reference teaches the claimed invention including a process for making fiber sheet comprising vapor-depositing metal oxide on the surface of a fiber sheet- col 14, lines 47-65; col 16, lines 9-23. The reference teaches oxygen/ manipulation during the patented process- col 6, lines 35-41; col 17, lines 12-18. Such manipulation, as claimed, it is submitted, would have been also practiced in the cited reference, in the absence of unexpected results and to afford process expediency.
